TourSCAN

Guard Tour System

The Newest Advance in Security Technology is Smaller, Tougher and Built in America.

Security has just entered a dramatic new era; the TourSCAN™ portable station scanner is the ideal solution for monitoring your security patrols. An extremely durable unit that fits in the palm of your security guard's hand and packed with the latest bar code technology. A quick scan of a station label, (stripped in a concealed area like a door jamb), records the station location, date and time instantly.

TourSCAN has the capability of recording up to 1,500 station visits and incidents. No more hand-written reports or log books. Round reports can then be printed on a serial printer or retrieved by a PC for more elaborate reporting. No more heavy time clocks. Weighing less than a pound, and powered by a 9 volt battery that provides smooth operation for five days service between charging periods. TourSCAN is precise, tamper-proof and foolproof. Memory is protected by a lithium battery for up to ten years, while the 9 volt battery is removed. The case is made of super tough, space age aluminum. Even the tip is retractable to protect against damage from drops.

The aluminum station labels are also tough, and designed to resist tampering. The station labels are easily installed anywhere and laminated with a black or red film to make the bar code impossible to copy.

In addition to its rugged dependability, TourSCAN is amazingly simple. Each guard carries a booklet containing all possible incidents with corresponding bar codes, and a bar code of his guard ID number. Before making the first round, the guard scans his guard ID number and then the site label. As each station visit is made, the guard scans the bar coded station number. He can note any observed incident by scanning the appropriate bar code in his booklet. At any time, the unit can be connected directly to a printer to obtain reports. Or the unit can be connected to an IBM PC for more detailed reports.

TourSCAN, although a new technology, comes with a background of experience. Manufactured by the Lathem Time Corporation, TourSCAN comes from an American company that's been in the business since 1919. A company well-known for its dependable, prompt and courteous service.

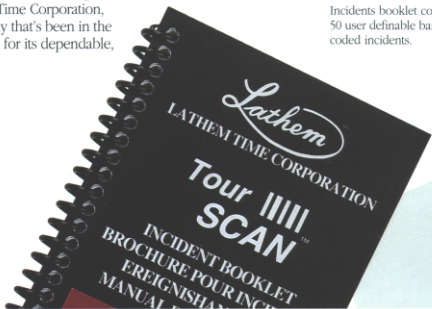

Produce customized, more informative reports, using TourSCAN Report Generator Software (GT1000).

Station labels are easily secured in hidden locations.

Incidents booklet contains 50 user definable bar coded incidents.

TourSCAN records the date, time, guard number, and station location of up to 1,500 station visits and incidents.

Report

A black, rectangular scanner with a textured surface. It has a strap attached to the right side. The word "Tour" is printed in a sans-serif font, followed by four vertical bars and the word "SCAN" in a larger, bold sans-serif font. To the right of this text is a small registered trademark symbol. Further to the right is the "Lathem" logo in a script font, also with a registered trademark symbol. Below the logo, the text "M.F.R." is visible.
